JUNCHENG JIA

352-870-3192 | jjia@ufl.edu | github.com/BBlaza

EDUCATION

University of Florida Expected December 2027

Bachelor of Science in Computer Science | Herbert Wertheim College of Engineering | GPA: 3.95

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Software Engineering, Databases, Numerical Analysis

EXPERIENCE

Colibri Technology | Software Engineering Intern May 2025 - July 2025

Software Department | Shenzhen, China

- Developed Modbus-based hardware control APIs for industrial scanners and motors, enabling software-driven device commands and status communication.
- Built a testing interface integrating custom hardware APIs, allowing users to operate and validate machine functions without direct hardware programming.

Sunday Studios Games | Software Engineer June 2026 - Present

- Developed an interactive spill-cleaning system in Godot using image manipulation and collision detection, with real-time progress tracking and completion-state logic.
- Built a state-driven tutorial system coordinating UI prompts, player interactions, and progression logic to guide users through core mechanics.
- Refined the trash-throwing interaction and its visual feedback, using an X-ray effect to highlight key elements and integrating special effects and cartoon-style animations.

PROJECTS

Sketchpad | Drawing and Animation Tool

Godot, GDScript | github.com/BBlaza/Sketchpad

- Engineered a configurable brush and eraser system with adjustable size, hardness, color, and styles, using stroke interpolation and alpha-based filtering for responsive real-time drawing.
- Designed a structured frame-layer data model for a custom animation timeline and layer editor, organizing drawing content across animation frames.
- Implemented multi-layer selection and batch copy, cut, paste, and delete operations, along with cross-frame layer manipulation for editing animation content.

TripleA | Open-Source Java Strategy Game Engine

Java, Swing | github.com/BBlaza/triplea

- Implemented a Swing game data panel using JPanel and AbstractTableModel, integrating existing game models into a structured table UI.
- Identified and resolved compatibility issues between Swing interactions and Apple trackpads in a mature codebase.

Polar Migrate! | Create-a-Thon 2026 Game Jam

Unity, C# | blazzabiom.itch.io/polar-migrate1

- Independently designed and developed a complete Unity game in 12 hours, creating all gameplay code, visual assets, UI, and integration from scratch.
- Prioritized core mechanics under a strict game-jam deadline and delivered a playable Windows build published on itch.io.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C++, C#, SQL, GDScript

Technologies: Git, GitHub, HTML, Modbus, Java Swing, Godot, Unity
